

Investment Opportunity Molecular Calculator

This is not just an investment opportunity,
it is an opportunity to change the way we live
for the better - forever

the inventor: Keith Dixon-Roche

1 Introduction

Further to recent discoveries concerning the atom and especially the neutron, it is now possible to develop a mathematical solution for chemistry.

This means that 'perfect' chemical reactions, including materials and medicines, can be calculated in minutes from a computer terminal.

Which in turn means that instant cures can be found for all viral diseases and cancers, with no side-effects, using trained but semi-skilled personnel.

Refer to:

"The Atom"

By *Keith Dixon-Roche*

More than 90% of all medicinal costs are generated for their creators because of laboratory testing. All laboratory testing will be eliminated with the introduction of a molecular calculator.

No more pollution will be generated by laboratory work carried out to find new chemicals and materials. They can be designed 100% correct on a computer (mathematically).

More important; perfect cheap medicines will be available for all. Nobody's right to live or die will be based on their ability to pay.

Its potential in terms of earnings and importance to all of life-kind on Earth is such that it should attract a considerable amount of government support.

Interested parties please contact me via the following email address: info@calqlata.com

2 Potential & Aims

The aims for this technology are to:

- ... eliminate all pollution from chemical experimentation
- ... eliminate all chemical laboratory experimentation
- ... eliminate the time taken to find new chemicals and materials

And with particular regard to medicines:

- ... eliminate the need for live testing
- ... eliminate the time taken to approve new medicines
- ... tailor medicines to the individual
- ... make all medicines available to all that needs them at a fraction of today's costs

3 The Technology

The technology is nothing more than a computer operated mathematical calculator and a database of chemicals that will grow with time.

The personnel required to operate this calculator will be trained in its operation, they will not need a detailed knowledge of mathematics or chemistry.

The molecular calculator should be considered the total and final solution for all chemical discovery. Whilst this calculator will grow in complexity and its database will grow in size with time, there will never be a replacement to this technology.

This technology will eventually cure all viral diseases, including cancer, 100% effective with no side-effects, in minutes.

4 Patents

Any potential patents will be generated as a result of the creation of the molecular calculator.

The ability to calculate the properties and behaviour of the atom are now known (by *The Inventor*).

5 Investment Plan

Whilst the workings of the atom have now been mathematically defined, for the first time in history, their application in the form of molecules needs further work.

It is expected that a working model of the calculator would need five to six mathematicians, two chemists and minimal administrative staff for a period of up to five years to make operable and initiate the chemical database. Its further development will then endure for the life of mankind.

The personnel required for the molecular calculator will need to include the following specialists:

- Mathematicians
- Chemists
- Computer programmer
